

# YOUR COMMUNITY KIOSK

Alexa can manage your visitor, staff and resident check in/check out. By voice or by touch screen. Get all of your data in one place, automatically notify everyone, all with with a friendly user interface.

## HOW IT WORKS

Your visitors, staff and residents can talk to Alexa or tap the screen to make themselves known. Alexa is a friendly user interface that people are familiar with and provides a highly interactive experience for your visitors, staff and residents.

## EVERYTHING IS CONNECTED AND INTERACTIVE

With Speak2, all of your community interactions are connected. When a visitor arrives, an announcement is automatically sent to the person they are visiting via Alexa, text and/or email. The visits are noted on everyone's calendar for audit purposes. All in the same system as your other interactions, calendars and data. Easily see across functions and connect the dots with simple reports.

## CONFIGURE YOUR OWN QUESTIONS

Author your own kiosk questions for visitors to answer to track information and use for historical reporting or to see trends.

Kiosk also marks residents as on/off premise automatically.

### DID YOU KNOW?

With our kiosk, residents can check in/out and are automatically marked as on/off premise, which is reflected in all staff and family views.
